

Semi-Annual Environmental Disclosure

Indiana Michigan Power (I&M)

I&M's Average Fuel Mix is for the 12-month period ended 3/31/18 compared to a Regional Average for 2017 supplied by the Michigan Public Service Commission.

Fuel Source	I&M's Average Fuel Mix of Electricity Provided to Michigan Customers (2)	Regional Average Fuel Mix Used to Generate Electricity in Michigan, Illinois, Indiana, Ohio and Wisconsin (3)
Coal	36.7%	48.752%
Nuclear	55.7%	26.841%
Gas	1.9%	17.003%
Oil	0.0%	0.419%
Hydroelectric	0.4%	0.907%
Renewable Fuels (Total)	5.1%	6.078%
Solar	0.01%	0.098%
Wind	4.87%	4.076%
Biofuel	0.10%	0.908%
Biomass	0.06%	0.523%
Solid Waste Incineration (1)	0.00%	0.036%
Wood	0.05%	0.436%
Other Fuel Sources	0.0%	0.0%

(1) Solid Waste Incineration includes Landfill Gas.

(2) The fuel mix data for the electricity supplied to you by I&M that appears in these tables includes regional average fuel mix data from Michigan, Illinois, Indiana, Ohio and Wisconsin as a proxy for the actual fuel mix of certain electricity purchased by I&M because the actual fuel mix characteristics of that purchased electricity could not be discerned

Purchased electricity accounted for 11.45% of the electricity supplied by I&M during the relevant period.

(3) Michigan's Regional Average fuel mix data has been prepared and supplied by the Michigan Public Service Commission - updated 11/29/2017

"-" not applicable or negligible

The Michigan Customer Choice and Electricity Reliability Act, Public Act 141 of 2000, requires disclosure of the following environmental information on a semi-annual basis.

Semi-Annual Environmental Disclosure

Indiana Michigan Power (I&M)

AVERAGE EMISSIONS CHARACTERISTICS

I&M data provided below represents the 12-month period ending 3/31/2018. The Regional Average data provided by the MPSC represents data for Sulfur Dioxide, Carbon Dioxide and Oxides of Nitrogen, while the nuclear waste numbers are based on the most recent fuel cycle ending 11/2017.

Type of emission or type of waste generated	I&M's Average (lbs/MWh) (2)	Regional Average of all generation in Michigan, Illinois, Indiana, Ohio, and Wisconsin (lbs/MWh)
Sulfur Dioxide	3.7	3.72
Carbon Dioxide	2,098.9	1,999
Oxides of Nitrogen	1.8	1.42
High-Level Nuclear Waste (1)	0.006083	0.0083

(1) The high-level nuclear waste numbers presented in the table do not represent actual emissions to the environment. They represent the amount of spent fuel generated (expressed in lbs/MWh) per unit of electricity generated.

(2) I&M's average emissions data for sulfur dioxide, carbon dioxide and nitrogen oxides represents average emissions from the fossil fuel portion of our generation mix. NOTE: with in-depth analysis, the environmental characteristics of any form of electric generation will reveal benefits as well as costs. For further information, contact I&M at www.IndianaMichiganPower.com, by phone at 1-800-311-6424 or Mike O'Brien, Michigan Governmental Affairs Manager at 1/517-367-1242
